

# **5MWH liquid cooling popularization of grid- connected communication base station inverters**

## Overview

---

· This paper presents a new liquid-cooling technology for uninterruptible power supply (UPS) units in which an air-cooling system is combined with an indirect water-cooling. LEOCH® is proud to announce that our Liquid Cooling 5MWh/2.5MW Integrated Battery Energy Storage System (BESS) has officially achieved UL 9540 certification. With UL certification, our system is engineered to reduce permitting complexity, ease utility approval, and accelerate deployment timelines. In continuation to part 5 of the series (Understanding BESS), published in April 2024, part 6 focuses on deeper aspects of the architecture of a 5MWh liquid cooling container, which is gaining popularity across large-scale grid-connected projects. What kind of single-unit BESS are used in HyperBlock III, a battery energy storage system integrated with a liquid-cooling system, provides high efficiency and flexibility for the utility-scale. With up to 5MWh battery capacity, HyperBlock III can offer a 34.5% increase in energy density, serving as an ideal choice for utility-scale. More than a month ago, CATL's 5MWh EnerD series liquid-cooled energy storage prefabricated cabin system took the lead in successfully achieving the world's first mass production delivery. 5MW/5MWh energy storage system with a non-walk-in design which facilitates equipment installation and maintenance, while ensuring long-term safe and reliable operation of the entire storage system. To further explore the energy-saving potential of 5G base stations, this paper proposes an energy-saving.
