

Are photovoltaic panel prices rising or falling

Overview

Prices have begun to fall after a brief stabilization phase – declining by around 5% to 8% across all technology classes in recent weeks. This drop returns prices to levels seen at the beginning of the year, a range that remains unprofitable for most module producers. Somewhere in the tumult of the global economy in recent months, solar panel prices hit bottom and then began to rise. Average price of solar modules, expressed in US dollars per watt, adjusted for inflation. says Martin Schachinger, the founder of pvXchange. Though prices are rising, they remain relatively affordable compared to historical. Solar panels got dramatically cheaper over the last decade and then suddenly prices stopped falling at the same pace. Some years even saw short term spikes.
