

# Are solar inverters mainstream

## Overview

---

That's where solar inverters come in. Inverters are found in nearly every solar installation, from small residential systems to large utility-scale plants, typically mounted near the main service panel, in a garage or directly beneath the panels. Inverters change the power produced by your solar panels into something you can actually use. Think of it as a currency exchange for your power. Every photovoltaic solar energy system for use with household electricity requires a way to transform the direct current (DC) energy created by the solar panels to AC. Solar inverters play a pivotal role in converting the direct current (DC) electricity generated by solar panels into alternating current (AC), which is used to power homes and businesses. DC energy is not safe to use in homes.
