

Asmara Bridge Using Foldable Container Network

Overview

River-sea intermodal transport is becoming increasingly popular for container repositioning in hinterland areas, owing to its cost-efficiency and low energy consumption. However, bridge heights and wate.

Asmara Bridge Using Foldable Container Network

An Empty Container Reposition Study with Foldable Containers

Abstract In order to solve the problem of empty container reposition considered foldable containers, the key factors affecting the use of foldable containers are found out. The mixed integer ...

Empty container repositioning with foldable containers in a river

The results show that introducing foldable containers into empty container repositioning along a river can utilize vessel space more effectively and decrease the total cost for container ...

Foldable container in empty container repositioning in ...

In this paper, we propose an empty container repositioning model in the intermodal transportation network of Belt and Road (B& R) Initiative by considering both standard and foldable containers.

Reliable design of container

shipping network with foldable container

In this sense, a robust mix of standard and foldable containers play a key role in reliable foldable container operation to facilitate the circulation of container flow in an intra- and inter-regional ...

Optimizing Empty Container Repositioning on a Liner Service ...

This study considers the empty container repositioning problem of shipping companies that use standard and 3-in-1 foldable containers with more advanced designs. An algorithm ...

Reliable Container Network with Disrupted Foldable Container ...

In this study, we investigate the potential of foldable containers to improve empty container repositioning in

river-sea intermodal transport, with consideration of bridge height and water depth

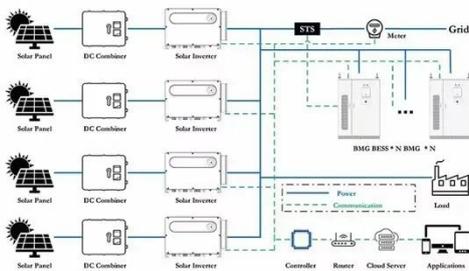

[Get Price](#)

Empty container repositioning with foldable containers in a river

We study empty container repositioning with foldable containers. Constraints of bridge heights and water depths are considered. A mathematical model is developed to find optimal solutions. Foldable ...

ANALYZING THE EFFECTS OF USING BOTH FOLDABLE AND ...

We analyze the effects of foldable containers using a newly developed multi-port and multi-period container planning model. The proposed model is a large-scale optimization problem, for ...
