

# Automatic irrigation of photovoltaic panels

## Overview

---

A solar-powered automatic plant watering system with light detection is an irrigation setup that uses solar energy to power a water pump, which supplies water to plants based on both soil moisture and light intensity. We just finished installing a DIY drip irrigation system for fruit trees, shrubs, and native pollinator plants – so let's check it out! This guide will teach you how to install a drip irrigation system with automatic valves, multiple zones, several types of adjustable drip emitters, and more. It can automatically water your plants at preset time intervals and amounts, and will automatically alarm when the water pump is idling or water shortage. The project aims to develop a sustainable smart irrigation system (SIS) for the indoor plant irrigation by integrating photovoltaic (PV), internet of things (IoT), and rainwater harvesting techniques. The addressed problem involves the inconsistency and tediousness of manual watering, emphasizing. Automatic Plant Watering System: Maintaining a healthy garden or farm can be time-consuming, especially with a busy schedule.
