

Automatic solar tracking reflective system

Overview

Heliostats are devices equipped with mirrors that continuously track the sun and reflect sunlight toward a fixed target, such as a solar power tower or a specific point on a building. The performance status of an automatic solar tracking system depends on various factors. These trackers are commonly used for positioning solar panels to maximize sunlight exposure. This adjustment minimizes light reflection, allowing the panels to capture more solar energy. A smaller angle of incidence results in increased energy production by a solar PV panel. Automating heliostats for continuous sun tracking maximizes their efficiency by ensuring that sunlight is always. The design of a novel reflective double-sided solar panel automatic solar tracker, focusing on enhancing photoelectric conversion efficiency through dual-precision dual-axis tracking and improved particle swarm optimization (PSO) algorithms. Adding more fixed panels typically provides better ROI than investing in tracking technology for most homeowners. Geographic Sweet Spot: Solar.

ENERGY STORAGE SYSTEM

Product Model
 HJ-ESS-215A(100KW/215KWh)
 HJ-ESS-115A(50KW 115KWh)

Dimensions
 1600*1280*2200mm
 1600*1200*2000mm

Rated Battery Capacity
 215KWH/115KWH

Battery Cooling Method
 Air Cooled/Liquid Cooled

Automatic Solar Tracking System

This paper introduces the design and development of an automatic solar tracking system aimed at optimizing the efficiency of solar energy collection.
