

Average service life of solar inverters

Overview

Solar inverters last 10–15 years on average, with microinverters and power optimizers often lasting 20+ years. Heat, quality, installation, and maintenance heavily influence lifespan. While solar panels are exceptionally durable and built to last 25 years or more, the inverter is a complex piece of power electronics that handles immense electrical stress and heat. According to the International Energy Agency (2024), Industry data and the Global Market Outlook by SolarPower Europe, an inverter can function for 10 years or more. If you live in an area with harsh weather conditions, your inverter may not last as long. If you frequently use your solar system or if it is. A solar inverter's job is simple but essential — it converts the DC electricity your panels produce into usable AC electricity for your home or business.
