

# Base station iron used for solar power generation and energy storage

## Overview

---

Inside a low-slung warehouse near the marshy coast of Berkeley, California, sleek trays filled with iron dust wait to be assembled into a new form of energy storage. The operation belongs to Form Energy, a company seeking to develop the world's first commercially available iron-air. Start-up Form Energy is developing a commercial Iron-Air battery for affordable, grid-scale, long-duration storage. The storage project is expected to be sited at the Boxberg Power Station, a coal-fired generator in Eastern Germany. 117-169) (IRA) and the Infrastructure Investment and Jobs Act (P. 117-58) (IIJA), which provide billions of dollars in funding for renewable and clean energy development. They're working on a new kind of battery using iron and air, and it could be a big deal for keeping our electricity reliable and affordable. Think of it as a way to store energy for days, not just hours, using simple, everyday stuff. By Stijn. A commonplace chemical used in water treatment facilities has been repurposed for large-scale energy storage in a new battery design by researchers at the Department of Energy's Pacific Northwest National Laboratory.

## Base station iron used for solar power generation and energy storage

### The iron-energy nexus: A new paradigm for long-duration energy

...

For deep decarbonization of the energy system, affordable energy storage capable of bridging intermittencies in the multi-day to seasonal generation of renewable electricity is essential.
