Base station power is yellow and has no output reason

Overview

The Power LED being amber is the problem. Use a voltmeter to read the voltage at the connector - it should be 12 volts DC. Visit our support page for answers from simple setup to security. The power and Internet LEDs should be green while the Camera one can be off or solid amber. One of the causes of this issue is expired firmware on the Wyze Base Station. It's important to remember that you shouldn't delete your Wyze Cam Outdoor or Wyze Base Station from the Wyze app while they show. Wyze Base Stations are reasonably reliable devices. It *does* have an ip address, but doesn't respond to pings. However, as with any technology, connection issues can sometimes occur, leaving users frustrated and unable to access their camera.

Base station power is yellow and has no output reason
