

Belgian energy storage mobile power supply

Overview

The project employs 320 units of Sungrow's PowerTitan liquid-cooled battery storage systems. Upon completion of the second 400MWh phase by the end of 2025, the entire installation will be providing clean, stable power for about 96,000 homes and helping stabilize Belgium's power grid. To address this challenge, energy storage systems are becoming a preferred solution for Belgian industrial and commercial customers to achieve power expansion and flexible energy dispatch. Remarkably, ENGIE finished the project in about 16 months, two months ahead. NHOA Energy has secured contracts from Engie for the supply, commissioning, and long-term service of an 80MW/320MWh battery energy storage system (BESS) at Engie's Drogenbos power station, located near Brussels, Belgium. The project represents the third large-scale battery deployment in Engie's. Battery farms are crucial missing links to facilitate the transition to renewable energy and move away from fossil fuels. The balance responsible party (BRP): They buy the electricity for the supplier and have an obligation to supply the agreed amount per time-unit.
