

# Can Antarctic wind generate electricity

## Overview

---

Antarctica offers favorable environmental conditions for the generation of energy from wind; it has year-round strong winds, off-the-shelf wind units that can easily be adapted to the special technical conditions in Antarctica, and a readily available, highly educated workforce. Antarctica offers favorable environmental conditions for the generation of energy from wind; it has year-round strong winds, off-the-shelf wind units that can easily be adapted to the special technical conditions in Antarctica, and a readily available, highly educated workforce. Australia is the first country to generate a significant amount of renewable energy for an Antarctic station using the most powerful winds on the planet. The view of Mawson station from atop the wind turbine. Photo: Jason Burgers The katabatic winds blowing from the inland of the continent make. Configuration produces energy in addition the required load (170kW) shown here. The superior areas are the Southern Ocean and the coast of the East Antarctica, followed by the Transantarctic Mountains, the coast of the. The evaluation of wind energy potential determines the feasibility and economy of wind power generation in Antarctica, among which mastering the variation rule of wind energy resource is the key to realizing the effective utilization of polar wind energy. Based on the 6-h ERA-5 reanalysis data of.
