

# Can photovoltaic panels be extended out of the roof

## Overview

---

Solar panels are typically installed within the boundaries of the roof to ensure they are securely anchored and to maintain the structural integrity of both the panels and the roof. With advancements in modular solar panel systems and mounting technologies, extending solar arrays over rooftops has become more. Is it acceptable for solar panels to extend beyond the ridge of a sloped roof?

There are a couple of reasons not to extend a PV array above the ridge of a sloped roof. The most important reason is that it's really ugly and doing so will decrease the value of your house and your neighbors' houses. I don't get any snow, but do get winds sometimes into the 30s or 40s mph. The distance impacts not only structural safety but also panel performance, roof integrity, and compliance with local building codes.
