

# Can photovoltaic panels discharge wires

## Overview

---

When homeowners ask "Can I discharge wires on photovoltaic panels?

", they're usually picturing something between a science fair project and a scene from Frankenstein. But here's the zap of reality: this process isn't about creating lightning in your backyard. It's about safety protocols, residual. Can I step down to a smaller diameter for the basement run ?

Thanks for any advise. I also have six strings, but I placed my combiner box outside the utility room in a sheltered location. Even outside of the city limits, we always keep the wires zipped. Wire Management Directly Impacts System Economics: Proper wire management reduces LCOE through decreased O&M costs, higher system availability, and extended component life. Quality wire management systems can reduce installation labor by up to 30% through tool-free installation and pre-planned. Voltage drop is the loss of electrical pressure along the length of a wire. A high voltage drop means less power reaches your inverter and batteries, reducing your system's overall energy output and wasting the money you've invested in high-efficiency panels. I'm considering running the connector cable and ground wire exposed to the control panel, also mounted to the pole. Is this OK per Code?

My alternative to this.
