

# Can photovoltaic solar panels be deformed

## Overview

---

The short answer to the question of whether or not solar panels will warp or bend on their own is no, they won't. Solar panels are generally very reliable and trouble-free as they have no moving parts and require minimal maintenance other than cleaning. It leads to corrosion and eventually to the failure of a PV module. Delamination often takes place in tropical. Despite the need for a long-lasting, reliable solar installation, we still see many solar panel brands continue to race to the bottom to compete on price. Degradation is a natural process.
