

# Can solar power generation be built on contracted land

## Overview

---

It is not enough to have the sun and the land to construct a solar energy facility. After discussing solar land-use metrics and our data-collection and analysis methods, we present total and direct land-use results for various solar technologies and system configurations, on both a capacity and an electricity-generation basis. Even in a regulatory environment that is favorable to renewable energy projects, every element of the facility must have the proper approvals to be. Landowners are increasingly approached by developers for solar energy leases, a trend bolstered by favorable government policies toward renewable energy. Solar leases involve long-term commitments, often spanning 50 years or more, necessitating thorough due diligence by landowners before signing. <sup>4</sup> Such amount would represent a nearly 30% increase from 2024, with solar and battery storage.
