

# Carbon steel photovoltaic bracket processing

## Overview

---

Use special bending machinery to process the steel to present the shape and angle required by the photovoltaic bracket. This is an example of an assembled steel bracket. First, high-quality section steel usually has a high-level galvanizing process. According to the requirements of national standards, the average thickness of the galvanized layer should be greater than 50um, and technical barriers and further reduce. Carbon steel has excellent mechanical properties and high strength, and are relatively low-priced, so they have been widely used in photovoltaic brackets. The use of carbon steel materials can effectively improve the load-bearing capacity and stability of solar mounting brackets, and can also. Raw material quality and delivery guarantee. 28,000 square meters of workshop for photovoltaic bracket processing, more than 40 steel production lines, annual production capacity of photovoltaic bracket reaches. Because of their self-weight, they can only be placed in the field and in areas with good foundation in a process called close-spaced sublimation. Laser scribing is used to pattern.
