

# Causes of unbalanced photovoltaic panel power

## Overview

---

Shading, inverter problems, panel degradation, and electrical issues can all contribute to underperforming solar panels. The latest version of the report, the 2021 Solar Risk Assessment, found that median annual degradation was about 1.09 percent for residential solar systems – about a quarter more than most panel warranties estimate (0.80 percent). When one phase is doing more work than the other, solar panels offer an excellent return on investment, and the savings you can expect over their 25- to 30-year service lives are much higher than their upfront costs. However, there are some performance issues that can affect solar panels, and they will undermine your savings if left unattended. Causes of unbalanced photovoltaic panel components

Causes of unbalanced photovoltaic panel components

What causes a voltage imbalance in a PV system?

Voltage imbalances in the grid are common occurrences resulting from asymmetrical loads or faults in the system.
