

China Electric Power Photovoltaic Panel

Overview

In 2024, China added 277 gigawatts (GW) of solar power, which was equivalent to 15% of the world's total cumulative installed solar capacity. [3] China's photovoltaic industry began by making panels for satellites, and transitioned to the manufacture of domestic panels in the. A car travels past photovoltaic panels at the Al Dhafra Solar project, constructed by Electricite de France SA (EDF) and Jinko Power Technology Co., in Abu Dhabi, United Arab Emirates, on Tuesday, . Shares of Chinese solar panel makers surged Wednesday after local media reported. Wind and solar surpassed a quarter of China's electricity generation for the first time in April 2025. Its PV capacity crossed 1,000 gigawatt (one terawatt, 1 TW) in May 2025. [1]. Last year, a viral drone video from China's Guizhou province revealed an entire mountain range blanketed in solar panels stretching to the horizon. 28. Since 2021, the solar photovoltaic (PV) modules market has experienced explosive growth, driven predominantly by the aggressive expansion of Chinese manufacturers, who maintain their dominance of global shipments. So there is a lot of uncertainty in the.

China adds 315 GW of solar in 2025 - pv magazine International

China installed a record 315 GW (AC) of new solar capacity in 2025, lifting cumulative installed PV capacity to 1.2 TW and pushing non-fossil power sources past thermal generation for the first time.

Solar photovoltaics
History
Solar resources
Concentrated solar power
Solar water heating
Effects on the global solar power industry
Government incentives

As of at least 2024, China has one third of the world's installed solar panel capacity and is the largest domestic market for solar panels. A large part of the solar power capacity installed in China is in the form of large PV power plants in the west of the country, an area much less populated than the eastern part but with better solar resources and available land.
