

China s solar photovoltaic power generation ranking

Overview

Wind and solar surpassed a quarter of China's electricity generation for the first time in April 2025. China is the largest market in the world for both photovoltaics (PV) and solar thermal energy. Its PV capacity crossed 1,000 gigawatt (one terawatt, 1 TW) in May 2025. [1]. China installed a record 315 GW (AC) of new solar capacity in 2025, lifting cumulative installed PV capacity to 1. China's National Energy Administration (NEA) released its 2025 power sector statistics on Jan. For context, it took until September last year to pass the 350 GW. Note: NEA considers utility-scale solar to include projects of at least six megawatts of installed alternating current capacity. Rapid solar capacity expansion overwhelms the grid, PV manufacturers compete for market shares, and then large target markets slap import tariffs on Chinese PV products, taking off their competitive edge.

China s solar photovoltaic power generation ranking

New edition of China PV Industry Development Roadmap released

In 2024, newly-added solar PV installations in China surged 28.3 percent year on year to hit 277.57 GW -- ranking first worldwide, the roadmap revealed. In the case of polysilicon, the ...

ENERGY STORAGE SYSTEM

Product Model
HJ-ESS-215A(100KW/215KWh)
HJ-ESS-115A(50KW/115KWh)

Dimensions
1600*1280*2200mm
1600*1200*2000mm

Rated Battery Capacity
215KWH/115KWH

Battery Cooling Method
Air Cooled/Liquid Cooled

GEM China wind & solar brief July 2024

Wind and solar now account for 37% of the total power capacity in the country, an 8% increase from 2022, and widely expected to surpass coal capacity, which is 39% of the total right now, in 2024.
