

Coke cans to make 10w solar panels

Overview

Using aluminum soda and beer cans, you can actively recycle and create a panel capable of heating air. Then a star is cut into the opposite end of each cleaned, dried can. Creating a solar panel out of soda cans is an innovative and eco-friendly DIY project that combines recycling with renewable energy. This guide shows you, step by step, how to make DIY solar panels using pop-cans (often called “pop-can solar heaters” or “aluminum can solar air heaters”). But if you like the feeling of building something from scratch, you might enjoy this hands-on approach to generating heat with a homemade solar thermal panel.
