

Communication green base station carries out lightning protection

Overview

The protection of GSM and base station towers from lightning and overvoltage is provided by integrating external lightning systems, internal lightning systems, earthing, equipotential bonding and LV surge arrester protection techniques within the framework of IEC-62305 standard. A hybrid lightning protection package that offers a robust and cost-effective solution for communication towers. Provides a total Lightning Protection System (LPS) which includes direct strike protection, surge protection and grounding. 56 presents the techniques applied to a telecommunication radio base station in order to protect it against lightning discharges. The need of protection is obtained from the methodology contained in IEC 62305-2, which is used to determine the relevant lightning protection. Lightning protection component technology Low-voltage surge protector surge protective device used in conjunction - Comprehensive Solutions for the Overall System Principles and methods of lightning protection How to choose a lightning surge protection device surge protective device Installation. Lightning protection for telecom communication base stations involves a multi-layered approach, including direct and indirect lightning strike protection.

Communication green base station carries out lightning protection

Communication green base station carries out lightning protection

How does a lightning protection system work? Reduces the risk of a direct strike by lowering the electric field to below lightning-collection levels within the protected area. Safely collects any strikes it cannot ...
