

# Community solar power station

## Overview

---

Community solar projects are large solar panel farms that generate electricity for more than one property. Community solar empowers more people to access the financial and environmental benefits of renewable energy. In most cases, customers benefit from energy generated by solar. That's where community solar comes in. 6 gigawatts of cumulative capacity installed across 44 states as of 2025, community solar is addressing the needs of the 80% of Americans who cannot access rooftop solar. The market is projected to add more than 6 gigawatts of additional capacity over the next five years, making solar. While solar can be the perfect solution for high energy bills for many homeowners, rooftop PV isn't feasible for a number of us due to space constraints, renting, zoning, and roof types.
