

Component prices under the new solar policy

Overview

solar module prices were already inching up in late Q1 2025 due to trade policy signals, and the April tariffs accelerated this trend. 26/W average in December 2024, reflecting anticipation. U. administration implemented a series of tariffs affecting a broad range of imported goods, including critical components for solar energy systems. These tariffs, varying between 10% and 50% depending on the country of origin, have introduced new challenges for the solar. In early April 2025, the United States enacted sweeping “reciprocal tariffs” on imports, aiming to mirror (at a discounted rate) the trade barriers faced by U. Solar Photovoltaic System and Energy Storage Cost Benchmarks, With Minimum Sustainable Price Analysis: Q1 2023 details installed costs for PV. The recent increase in tariffs on solar wafers, polysilicon, and tungsten announced by the Biden administration aims to reduce reliance on imports, particularly from China, and boost domestic manufacturing.

Component prices under the new solar policy

New Tariffs on Solar Components: Implications for U.S. Domestic

Solar wafers and polysilicon account for over 50% of the cost of a solar panel. With imports supplying a significant majority of these materials, tariffs will directly increase module costs.
