

# Comprehensive analysis of the photovoltaic energy storage industry

## Overview

---

The report on the solar energy storage market provides a holistic analysis, market size and forecast, trends, growth drivers, and challenges, as well as vendor analysis covering around 25 vendors. The US Energy Storage Monitor is a quarterly publication of Wood Mackenzie Power & Renewables and the American Clean Power Association (ACP). Each quarter, new industry data is compiled into this report to provide the most comprehensive, timely analysis of energy storage in the US. All forecasts. The US solar industry installed 7.5 gigawatts direct current (GW dc) of capacity in Q2 2025, a 24% decline from Q2 2024 and a 28% decrease since Q1 2025. Solar accounted for 56% of all new electricity-generating capacity added to the US grid in the first half of 2025, with a total of 18 GW. This increase aims at developing new energy storage technologies that improve grid reliability, manage peak load demand, and support the shift toward a decarbonized electricity system. Rising concerns over grid instability and power outages are accelerating the deployment of energy storage systems. As solar energy adoption accelerates globally, efficient power storage solutions are no longer optional—they're essential. 96 billion during 2023-2028, accelerating at a CAGR of 10. It is anticipated that the revenue will experience a compound annual growth rate (CAGR 2026-2032) of xx%, leading to a market volume USD xx Billion by 2032 This "Photovoltaic Energy.
