

Conakry new energy storage project

Overview

Recently, a PV-storage-diesel microgrid project in Conakry, the capital of Guinea, completed its trial run and was officially delivered and put into commercial operation. The project has an installed capacity of 7.5MW/15MWh, aiming to provide more stable power supply to the local.

Summary: The Conakry Battery Energy Storage Project represents a groundbreaking initiative to stabilize Guinea's power grid while accelerating renewable energy adoption. This article explores its technical specifications, environmental impact, and role in reshaping West Africa's energy landscape. Guinea's capital has launched an ambitious photovoltaic energy storage policy to address its growing energy demands while reducing reliance. Conakry, Guinea's bustling capital, faces an energy paradox. While blessed with abundant solar resources (averaging 5.8 kWh/m²/day), the city experiences daily blackouts lasting up to 12 hours during peak seasons [1]. With 12+ years of project experience across 23 countries, we help clients achieve energy. to develop large-scale energy storage projects. Reducing risk in power generation planning.
