

# Cover the photovoltaic panel with a film

## Overview

---

Photovoltaic backsheet film is a crucial protective layer for solar panels, enhancing their durability and efficiency, safeguarding against environmental damage, and boosting energy conversion efficiency. New solar panels often arrive with protective film—but should it stay on?

This comprehensive guide explains the crucial difference between factory shipping films (which must be removed) and aftermarket plastic covers (which have specific valid uses). High weather resistance: Capable of withstanding harsh weather conditions, prolonging service. Also Read: [How Does a Solar Pool Cover Work?](#)

The solar panel protective film types are: 1. Polycarbonate: Durable, shatter-resistant plastic that can withstand extreme temperatures, impact, and UV rays. Typically, clips, brackets, or adhesives are used for installation. Tempered Glass: Robust. Norgard® Front Sheet ETFE Film is manufactured from a high-performance fluoropolymer resin.

## Cover the photovoltaic panel with a film

### Solar Panel Protection

Protective films for solar panels are specially designed coatings or layers applied to the surface of solar panels to enhance their durability, performance, and longevity.
