1-3MWh

BESS

Overview

A commercial battery energy storage system in Cyprus can store solar energy, reduce grid reliance, support net billing, and even protect against blackouts. While this model ensured supply continuity in the past, it has also resulted in high energy costs, grid inflexibility, and limited capacity to absorb renewable. In May 2025, Cyprus successfully commissioned its first significant battery energy storage system (BESS), marking a major step toward enhancing the country's energy infrastructure and aligning with its national goals for renewable energy integration and grid optimization. In this comprehensive guide, we at CGP Solar explain why BESS is becoming essential for businesses in Cyprus, how it works, who needs it. The Apollon PV park has commissioned the 3. Cyprus has taken a step toward modernising its energy infrastructure with the commissioning of a 3. Operated by the University of Cyprus, this is the country's largest solar pv storage project to date and the first of its kind at.
