

Desert becomes solar power station

Overview

China is transforming the Kubuqi desert into a major solar energy production site, integrating photovoltaics and soil restoration, to reinforce its decarbonization objective. The Kubuqi desert in Inner Mongolia is a key area in China's energy strategy. But the result was surprising: the installation also transformed the surrounding environment, giving. Engineers in a familiar continent are looking to transform what would have been called a dead zone into a clean-energy utopia with the help of 20 million solar panels. In this article, we will examine why this move is not only important locally but globally as well. Taklamakan Desert, Xinjiang, China - The one-year inauguration of the world's largest solar farm marks yet another milestone for Chinese renewable energy. Deserts are spacious, relatively flat, rich in silicon - the raw material for the semiconductors from which solar cells are made — and never short.

Desert becomes solar power station

The Kubuqi desert becomes a strategic hub for solar energy in China

China is transforming the Kubuqi desert into a major solar energy production site, integrating photovoltaics and soil restoration, to reinforce its decarbonization objective. The Kubuqi desert in ...
