

Design of homemade solar heat storage barrel

Overview

Food grade plastic 55-gallon barrels have so many uses around the homestead, including heating water. Looking for ideas and inspiration to build your own passive solar greenhouse?

You'll love the greenhouse our friend Ryan Merck at Blue Oak Horticulture built — and the final price tag! What is a passive solar greenhouse?

In case you're not familiar with the term, a “passive solar greenhouse” is a. The steps to building a solar powered water heater are here: This is a very simple design for a batch-type solar water heater that uses a thermosiphon loop to move water between a solar thermal collector and a storage barrel. The system can provide useful amounts of hot water for an outdoor shower. The tank is basically a reinforced OSB box that is lined with insulation board and then EPDM rubber sheet. The lining is a single piece of EPDM rubber sheet with no seams -- it provides a very long life, high temperature, waterproof tank lining. Passive solar greenhouses make this reality possible through intelligent design that captures, stores, and releases the sun's energy exactly when plants need it most.
