

# Do photovoltaic panels need polyester film

## Overview

---

With solar installations projected to reach 3.5 TW globally by 2030, PET films serve critical roles in PV module manufacturing, particularly as backsheets and encapsulants. Their lightweight, durable, and weather-resistant properties align with the need for cost-efficient. Polyester films can be used in a variety of constructions that are either mounted on the back of photovoltaic solar modules (crystalline) or used as a part of the construction for coated flexible photovoltaic solar modules (thin film). There are many different constructions available on the market. PET Film (polyester film), as an outstanding packaging and electronic material, plays a non-negligible role in solar panels and green technologies. The. New solar panels often arrive with protective film—but should it stay on?

This comprehensive guide explains the crucial difference between factory shipping films (which must be removed) and aftermarket plastic covers (which have specific valid uses). Learn proper removal techniques, understand. Rising global demand for solar energy infrastructure is a primary driver for polyester PET films in the photovoltaic (PV) sector. This polyethylene-based product provides excellent performance in a non-fluorinated film.

12.8V6Ah

Nominal voltage (V):	12.8
Nominal capacity (Ah):	6
Rated energy (WH):	76.8
Maximum charging voltage (V):	14.6
Maximum charging current (A):	6
Floating charge voltage (V):	13.6-13.8
Maximum continuous discharge current (A):	10
Maximum peak discharge current @10 seconds (A):	20
Maximum load power (W):	100
Discharge cut-off voltage (V):	10.8
Charging temperature (°C):	0-+50
Discharge temperature (°C):	-20-+60
Working humidity:	<95% R.H (non condensing)
Number of cycles (25 °C, 0.5C, 100%DoD):	>2000
Cell combination mode:	32700-4s1p
Terminal specification:	T2 (6.3mm)
Protection grade:	IP65
Overall dimension (mm):	90*70*107mm
Reference weight (kg):	0.7
Certification:	un38.3/msds

## Polyester PET Film for PV Market

The solar photovoltaic (PV) industry relies heavily on polyester (PET) films for backsheets and encapsulation due to their durability, electrical insulation, and moisture resistance.
