

# Does the solar power supply panel have a power storage panel

## Overview

---

Most residential solar panel setups use electrochemical storage in the form of batteries. Batteries provide an easily accessible energy supply and don't require masses of space to install. The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. Sometimes two is better than one. Different storage systems offer advantages in different scenarios. Short-term, quick-release storage is needed to maintain a stable energy output through short term fluctuations that can occur. Solar panels, also known as photovoltaic (PV) panels, harness the sun's energy and convert it into electricity.
