

Dominican Republic s first gravity energy storage system

Overview

The Egeltabo BESS is a 100% clean project with 7.5 MW of capacity and cutting-edge technology. BESS is a type of energy storage system that uses rechargeable batteries to store electrical energy from the grid or power plants and release it later when needed. The installation is intended to stabilize the electric grid and facilitate the integrating of renewable energy sources, such as solar. During the “Energy Sector Reform” Forum organized by the Dominican Association of the Electric Industry (ADIE) and the Technological Institute of Santo Domingo (INTEC), Edward Veras, executive director of the National Energy Commission (CNE), emphasized the Dominican Republic's progress in energy. Construction has started on the first major solar-plus-storage project in the Dominican Republic, which features a 24.8 MW/99 MWh battery energy storage system (BESS). The Comisión Nacional De Energia (CNE) of the Dominican Republic announced the start of work on the Dominicana Azul solar project. The Dominican Republic is taking significant strides in its energy transition, with a strong emphasis on renewable energy and energy storage. During 2017's Hurricane Irma, the Andres system remained online and operational, maintaining the target frequency and supporting grid resiliency while almost 40 percent of the island was without power.

Dominican Republic s first gravity energy storage system

Dominican Republic Energy Storage & Its Sustainable Future

To foster the development of energy storage, the Dominican Republic has established a supportive regulatory framework for this emerging technology. The national regulatory authority has ...
