

# Drilling holes in the legs of solar photovoltaic panels

## Overview

---

Auger drilling is the process of creating holes in the ground to secure the foundation for the solar panel system. Is it safe to drill through the metal frame of a solar panel?

When tapped it feels as if it is hollow. One of the primary benefits of auger drilling is its efficiency. The selected solar panel is known as Top-of-Pole Mount (TPM), where it is designed to install quickly and provide a secure mounting structure for PV modules on a single.
