

# Eastern European air-cooled energy storage system

✓ 50KW/100KWH

✓ HIGHER POWER OUTPUT  
IN OFF-GRID MODE

✓ CONVENIENT OPERATION  
& MAINTENANCE

✓ PRE-WIRED

## Overview

---

CAES stores excess renewable energy by compressing air into subsurface cabins and releases it during high demand via turbine expanders, generating electricity back into the grid. EASE will now be known as Energy Storage Europe, with a new identity designed to give the sector a stronger visibility. This transformation marks a significant milestone as the association approaches its 15 th anniversary and reflects the central role that energy storage now plays in Europe's. Thermal mechanical long-term storage is an innovative energy storage technology that utilizes thermodynamics to store electrical energy as thermal energy for extended periods. 48% during 2026–2033, reaching 23. The Europe Air-cooled Energy Storage. This tracker monitors Horizon Europe's financial contribution to the development of digital technologies and the digitisation of the economy and society (known as 'Digital transition').
