warranty

Overview

Electricity in India is generated by both public and private sector utilities, transmitted through a unified national grid, and distributed primarily by state-owned distribution companies. India is the third-largest producer and consumer of electricity globally after China and the United States. In FY 2024-25, the country generated 1824 TWh of power, of which 25% came from non-fossil sources. [7] India has achieved near-universal household electrification, though the quality and. The World Bank has played a crucial role in supporting India's electricity sector by financing three projects that illuminate vast regions of the country, ensuring that the power sector remains a growth engine for the economy. The North Eastern Region Power System Improvement Project has upgraded. Electricity Act 2003 has been enacted and came into force from 15. For details please refer to methodology section. Utmost care has been taken to ensure that all maps used in the website conform to Survey of India boundaries.
