

# Energy Storage Solutions Gravity

## Overview

---

At its core, gravity-based energy storage is a method of storing energy by using gravity as the storage medium. The G-VAULT™ platform utilizes a mechanical process of lifting and lowering. These startups use gravitation to store energy safely for a long time and deliver it on demand at a lower lifetime cost. Energy Vault SA implements large-scale projects building energy storage systems including gravity-based, battery-based and green hydrogen-based, managed by its proprietary energy. To sustain an uninterrupted supply of energy in a grid system dominated by renewable energy sources, there must be substantially larger storage capabilities than available today to cover long periods of little or no wind, and reduced periods of sunshine.
