

# Energy storage policy armenia

## Overview

---

Diversifying energy sources and reducing import dependencies are key Armenian policy priorities. With no significant domestic fossil fuel reserves, hydroelectric power is the primary local energy source. Yerevan aims to expand renewables to meet decarbonization targets and decrease. As Armenia works towards the Government's ambitious renewable energy targets and the share of variable renewable generation increases, the country might need to install battery storage systems to ensure the reliable and smooth operation of its power system. While the need for battery storage is, a 25-35 MW-4h BESS offers a cost-effective solution to enhance system resilience. Armenia imports 81% of its primary energy supply and 100% of its fossil and nuclear fuels. These imports stem mainly from Russia and to a lesser extent also from Iran. Expansion in cross-border transmission capacity is. The Government of Armenia is looking to launch an energy storage program leading to the development of the first pilot storage projects in the country. The global energy storage market, worth \$33 billion [1], offers solutions this Caucasus nation is now embracing. Let's unpack how. ts and identified an optimal battery storage use case.
