

Expropriate farmland to build solar power generation

Overview

A new initiative in California will repurpose farmland that is no longer able to sustain agriculture. Driven by subsidies, mandates and federal and state policies compelling the use of more renewable energy, solar energy facilities are now displacing farmland at an increasing rate. While land leases generally offer protection for landowners so that farms can be reclaimed from the solar. Large-scale facilities are being built across the country to meet the nation's electricity needs. Landowners are exercising their personal property rights to lease their land to solar developers, helping ensure their family has a stable revenue stream over the life of the solar facility, which can. The 21-GW solar farm initiative will “create thousands of construction and long-term jobs, and help California meet its statewide renewable energy goals. ” A representational image of a solar farm. As shown in Map 1, roughly 18% of ground-mounted PV facilities in the U.
