

Financing for a czech integrated energy storage cabinet three-phase project

2024 - 2025

Overview

The European Commission (EC) has authorized a €279 million (\$303 million) Czech state aid scheme to support investment into electricity storage facilities and foster the transition towards a net-zero economy. Czechia has increased funding for its interest-free loan program for commercial and industrial (C&I) solar and storage projects to CZK 3 billion (\$132.2 million) after strong demand exhausted the previous budget. Hence, the measure is designed to improve integration of renewable energy sources, reduce the need for gas-fired power generation, and consequently decrease natural gas is essential for integrating variable renewable. The aid will take form of direct grants which will cover up to 50% of the investment cost of supported projects.
