

# **Fire station uses Nanya photovoltaic outdoor cabinet for bidirectional charging**

## Overview

---

This article will introduce in detail how to design an energy storage cabinet device, and focus on how to integrate key components such as PCS (power conversion system), EMS (energy management system), lithium battery, BMS (battery management system), STS (static transfer switch), PCC. This article will introduce in detail how to design an energy storage cabinet device, and focus on how to integrate key components such as PCS (power conversion system), EMS (energy management system), lithium battery, BMS (battery management system), STS (static transfer switch), PCC. Bidirectional electric vehicles (EV) employed as mobile battery storage can add resilience benefits and demand-response capabilities to a site's building infrastructure. A bidirectional EV can receive energy (charge) from electric vehicle supply equipment (EVSE) and provide energy to an external. The Outdoor Photovoltaic Energy Cabinet is an all-in-one energy storage system with high strength, which can work under harsh environmental conditions to supply high-performance energy backup and regulation. Built-in lithium iron phosphate battery, off-grid inverter and energy management system (EMS). What is an Outdoor Photovoltaic Energy Cabinet for base.

## Fire station uses Nanya photovoltaic outdoor cabinet for bidirectional

---

### OUTDOOR CABINET

The following models represent typical configurations, but they can also be outfitted with additional components such as photovoltaic charging modules, parallel and of-grid switching modules, power ...
