

Generator GCB energy storage motor

Overview

Use of SFC and GCB in a Pumped storage hydro plant Static Frequency Converters (SFCs) facilitate starting and operating pump-turbines, while Generator Circuit Breakers (GCBs) protect the generator and step-up transformer during mode switching and short circuits SFCs. Use of SFC and GCB in a Pumped storage hydro plant Static Frequency Converters (SFCs) facilitate starting and operating pump-turbines, while Generator Circuit Breakers (GCBs) protect the generator and step-up transformer during mode switching and short circuits SFCs. Hitachi Energy is the leader in design and manufacturing of GCBs since 1954 with more than 8,000 deliveries in over 100 countries. We offer the widest and most modern portfolio of GCBs in SF 6 technology across a range of short circuit ratings from 63 kA to 300 kA and continuous currents from 6,300. GE Vernova's Generator Circuit Breakers (GCBs) are ideally suited for new and refurbished power plants from 50 MW to 1,500 MW and feature advanced technology with spring-spring-operated mechanisms. They are also ideal for retrofitting existing power stations that lack generator circuit. Unknown catalog request error. Building additional PSPPs particularly in the areas with high installed capacities of wind parks and solar power plants will significantly improve the grid reliability.
