

Greece battery electric vehicles bevs

Overview

This report presents a comprehensive overview of the Greek battery electric vehicles (BEVs) market, the effect of recent high-impact world events on it, and a forecast for the market development in the medium term. Greece is far behind the European Union average in the adoption of electric mobility. 4%) was nearly three times higher than in Greece (6. 4%. December 2025: Data were solidified! In Greece it is estimated that roughly 0,5105% or 1 in 196 vehicles are fully electric Every day, on average 38 fully electric vehicles are registered Monthly market share of fully electric vehicles is 10,69%

Disclaimer: The charts and the resulting data may not. Powered solely by the electricity stored in their high-voltage batteries, battery electric vehicles (BEVs) are either driven by a single unit or a combination of (alternating current or direct current) electric motors, typically with electric power above 60kW. However, challenges such as fragmented charging infrastructure, regional disparities, and poor user experiences threaten progress.
