

Guatemala Communications Green Base Station Withdraws Small

Overview

The baseband module of the soft base station adopts Micro Telecommunications Computing Architecture (MicroTCA) and is characterized by small size, low power consumption, modularization, and good scalability. It can also process baseband signals of several modes, including GSM. Data traffic and the number of mobile subscribers have increased significantly prompting cellular network operators to install additional mobile cellular base stations (BSs) to meet the increasing demand. This proliferation of BSs has resulted in consequential increase in energy consumption and.
