

Haiti electricity consumption

Overview

On average consumption is 21 Kilowatts (kW) per person annually, although the Ministry of Public Works estimates that consumption might be higher if illegal connections were included. This is the Energy Report Card (ERC) for 2023 for Haiti. The ERC also includes sectoral data and information on policies and regulations; workforce; training and capacity building; and related areas. The data and information that are available in the ERC were mostly provided by the government. Electricity can be generated in two main ways: by harnessing the heat from burning fuels or nuclear reactions in the form of steam (thermal power) or by capturing the energy of natural forces such as the sun, wind or moving water. 86 billion kilowatthours, unchanged from 0. In comparison, the world average is 142. The majority of the population relies on self-supplied energy, leading to a profound energy and environmental crisis.
