

# High-efficiency Belgian mobile energy storage container for farms

## ESS

## Overview

---

ENGIE built the Vilvoorde BESS to provide key grid flexibility. The system can absorb 200 MW of power for four hours, then inject energy back for another four hours. That bidirectional capacity helps balance renewables and supports grid stability. SCU provides a 20ft energy storage container to help customers maximize the use of energy resources, reduce operating costs, and promote the sustainable development of agriculture. The pig farm has achieved a high degree of automation, from feeding systems, water lines, and feed lines to manure. Montea is to invest almost €30 million in battery-based energy storage systems, the property company announced in a press release on Friday. In this way, Montea aims to reduce the ecological footprint of all its sites, as well as its dependence on the energy grid.
