

Hot-dip galvanized steel material model for photovoltaic bracket

Overview

A36 steel shall be used for H-shaped steel piles, diagonal braces, purlin brackets and joint parts. Their mechanical properties and chemical composition shall meet the requirements of ASTM A36/A36M-08 "Standard Specification for Carbon Structural Steel." Columns, sloped beams, and purlins shall be.

1. Superior corrosion resistance: Through the hot-dip galvanizing process, the zinc layer forms a metallurgical bond with the steel, which can effectively isolate air, moisture and corrosive substances and protect the base material from rust.

High structural strength: The base material is mostly. The installation area of Hot-Dip Galvanized Steel photovoltaic bracket can be ground screw, concrete foundation, C-shaped steel pile or H-shaped steel without geographical constraints, applicable materials have high corrosion resistance. There are three main specifications (ASTM A123, A153, and A767) governing th to apply a protective coating of zinc to steel or iron surfaces. It involves immersing the cleaned and p t-dip galvanized on the surface to improve corrosion. Our self-developed independent single-row tracking bracket 1P system can adapt to 20% slopes on north and south slopes, remains close to the ground, and has strong wind resistance.

Hot-dip galvanized steel material model for photovoltaic bracket

Hot DIP Galvanized Steel+ Aluminum Magnesium Zinc Plate+ Pre Galvanized

Our self-developed independent single-row tracking bracket 1P system can adapt to 20% slopes on north and south slopes, remains close to the ground, and has strong wind resistance.
