

# How many watts of voltage is better for photovoltaic panels

## Overview

---

How many watts is the best voltage for solar panels?

To determine the optimal wattage for solar panels, various factors come into play—1. Efficiency and energy requirements, 2. The efficiency of. Different solar panels have varying voltage ratings, typically ranging from 12V to 48V. 12V panels are often used for small solar setups because they are compatible with 12V battery systems, which are common in RVs, boats, and off-grid applications. The calculated amps from watts and voltage are 10 to 12 amps per hour for a 200-watt solar panel. You'll often see it referred to as “Rated Power”, “Maximum Power”, or “Pmax”, and it's measured in watts or kilowatts peak (kWp). Some of the reasons are positive, some are not.
