

# How much does the company s energy storage equipment cost

## Overview

---

In 2025, the typical cost of commercial lithium battery energy storage systems, including the battery, battery management system (BMS), inverter (PCS), and installation, ranges from \$280 to \$580 per kWh. Larger systems (100 kWh or more) can cost between \$180 to \$300 per kWh. DOE's Energy Storage Grand Challenge supports detailed cost and performance analysis for a variety of energy storage technologies to accelerate their development and deployment The U. Different commercial energy storage projects can look completely different in terms of capacity, duration, hardware, and site conditions—but we can still give. Capex of \$125/kWh means a levelised cost of storage of \$65/MWh 3. With a \$65/MWh LCOS, shifting half of daily solar generation overnight adds just \$33/MWh to the cost of solar This report provides the latest, real-world evidence on the cost of large, long-duration utility-scale Battery Energy.
