

How much wind is needed for wind turbines to turn

Overview

The minimum wind speed needed for a wind turbine to start producing power is generally between 7 to 9 mph. To operate effectively, aim for wind speeds of 7 to 9 mph for power production, and for peak efficiency, target speeds between 25 to 55 mph before safety measures engage to. Understanding how much wind is necessary for a turbine to operate, and under what conditions, reveals the careful design behind these renewable energy generators.

How much wind is needed for wind turbines to turn

Wind Energy Factsheet

Wind could provide 20% of U.S. electricity by 2030 and 35% by 2050. 11 Five of the eight Great Lakes states have offshore wind energy potentials that exceed their annual electricity demand (MI, WI, NY, ...
