

# How to check the battery connection of the communication base station

**51.2V  
200Ah/300Ah  
LiFePO4 battery**

## Overview

---

Open the electronics box & check to see if the status light (outlined in red below) is flashing green. If it is flashing green, your base station is working. A method of isolating the power supply connection must be included in the supply circuit. The base station uses a NiMH battery pack to. Before diving into complex technical diagnostics, it's essential to perform some basic checks. Look for any signs of physical damage such as broken cables, loose connectors, or overheating components. Check the power supply; ensure that the base. The recording and processing requirements of the base station battery test data, the accumulation of these data, can create a complete battery file, providing a credible basis for skill determination planning. Click on a dot or swipe/drag the headset system available for your business needs. The interactive HOME screen provides you with a complete overview of your system at a glance.
